case study

APPLICATION:

An automotive parts manufacturing company was planning to use of its new facility as a welding training area when they realized a need for a welding fume control system. They wanted a system where the welders did not have to take time and effort to move every time they ran long welds or changed fixtures. Another requirement was the ability to handle MIG and ARC welding, as well as grinding, without effecting the process.

SOLUTION:

After extensive research, the company decided on Lev-co's solution and purchased 17 DT-800 downdraft tables with a built-in performance blower providing excellent capture velocities and self-cleaning cartridge filters.

PRODUCT DESCRIPTION:

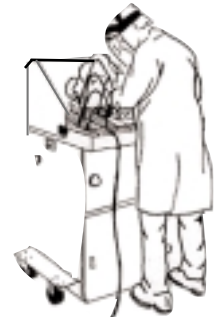

17 x DT-800 Downdraft Tables with self-cleaning Vibra Pulse filters
1 x Installation as per Industrial Ventilation Guidelines

INDUSTRY:

Tier 1 Automotive Parts Manufacturing

TESTIMONIAL:

"One wouldn't even realize that 17 welders are working in this room due to the effectiveness of the DT-800 self-cleaning downdraft table."
