case study

APPLICATION:

A company in the food industry used an automatic grinder (wet) with 20" diameter blade/wheel and a 20' horizontal machining travel. They needed a product to capture the mist it was expelling before it contaminated the environment. They also required a filter with a low maintenance (non-electrostatic) filtration system.

SOLUTION:

They purchased an F-120 Oil Mist Collection System complete with a Chevron Mist Eliminator, preventative maintenance gauge, and drain kit to recycle coolant/oil. The push-pull design can span across a 3' wide grinding area.

PRODUCT DESCRIPTION:

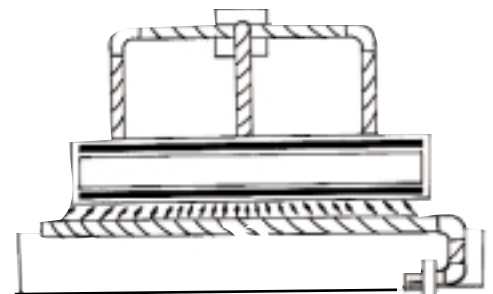

- 1 x F-120 Oil Mist Filter System
- 1 x CV Chevron Mist Eliminator
- 1 x Push/Pull Air System
- 1 x Installation as per Industrial Ventilation Guidelines

INDUSTRY:

Food Grade Cutting Machines

TESTIMONIAL:

"We had 3 companies evaluate our application. One couldn't figure it out, the other tried a demo and failed, but LEV-CO gave us a performance guarantee and proved their engineering was accurate."
