

Low noise level

Built in silencer and fan/motor combination between filters for low noise

Full pressure drop control

Each filter stage has its own pressure gauge

Effective Filtration

Self-draining filter cassettes

NX-600/1200/2400

Coolant or Oil Mist

The **NX** oil-mist filter unit has 99.99% filtration efficiency with HEPA Filters (optional). It was developed in order to guarantee a high separating efficiency, which does not deteriorate even over long periods of operation.

Washable Filter Cassettes

The **NX** units are equipped with self-draining washable filter cassettes made of deep-pleated glass-fiber media with aluminum separators. With a pressure gauge per filter cassette you easily know when it is time to wash the filters (the HEPA filter is not washable). These easy-to-clean washable filters will allow the **NX** units to be operated continuously over long periods without service (**up to 5 years**). As a result, the need for frequent replacement, and safe disposal of filters is eliminated - providing productivity and environmental benefits.

Complete Unit

The **NX** oil-mist filter unit is a complete unit of powder-coated sheetmetal with filter cassette(s), fan and circuit-breaker with motor overload protection. Inlet from left or right with inlet flange and cover flange for the not used inlet. Drain connection from left and right.

A very profitable investment

The filters have been designed to comply with future OSHA requirements, rather than present day requirements. The filter cassettes have a very long operating life in order to minimize servicing and maintenance costs. The filter cassettes' unique properties ensure very low power consumption. The filters can run continuously 24 hours/day, 365 days/year. The purified air can often be recirculated to the premises.

Modular design

The **NX** oil-mist filter units are based on a modular design, which makes it possible to provide customized solutions ranging from single units to large central operations.

30 years experience

30 years experience of construction and production are at your disposal! The **LEV-CO** extraction systems are a combination of well tested solutions and new ideas.

LEV-CO is always a step ahead, but not expensive!
