case study

APPLICATION:

A welding school located in southeastern Québec was concerned with the amount of welding smoke being generated in their facility. They required a filtration system that was low-maintenance, user-friendly and could withstand the abuse of a school environment.

SOLUTION:

LEV-CO proposed a system using five HC-4 horizontal cartridge dust collectors for welding smoke, as well as four Flexi extraction arms per collector. The remote mount capabilities and auto-clean on shut down made this an ideal solution in terms of low-maintenance. Flexi extractors were chosen for their ease of use, ability to remain in place when positioned, and capacity to stand up to a harsh working environment.

PRODUCT DESCRIPTION:

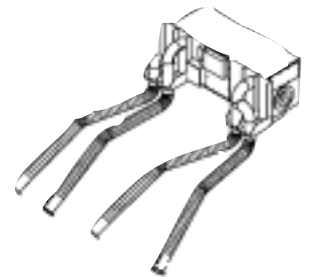

- 5 x HC-4 Four Cartridge Dust Collector
- 5 x Auto-Clean "Vibra Pulse"
- 5 x Silencer option
- 20 x Flexi Extraction Arm

INDUSTRY:

Welding School

TESTIMONIAL:

"We have been running this system full-time for two years without a problem. We appreciate the service and products that we receive from LEV-CO and continue to purchase quality air cleaning equipment from them on a yearly basis."
