case study

### APPLICATION:

A CNC machining shop was having a mist problem emanating from a Matsuura Milling machine. They also had a problem with aluminum shavings when they used their Cobra Cutter. They needed a system to eliminate the oil mist from the Milling machine and particulate from the cutter.

### SOLUTION:

LEV-CO recommended the 1200 VOM vertical coolant mist, smoke, and dust collector. The low profile of the 1200 VOM was an advantage as space was at a premium. With the built in silencer, Chevron mist eliminator filter, intake plenum (which acts as a dropout chamber for chips) and the hi-pressure backward incline blower, this unit provided more than enough CFM for both machines. LEV-CO provided two pickup hoses, one for the milling machine the other for the cutter.

### PRODUCT DESCRIPTION:

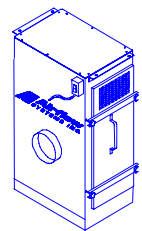

1 x 1200 VOM mist, smoke and dust collector

### INDUSTRY:

CNC Machine Shop

### TESTIMONIAL:

"I've worked here for the past 8 years and gone home with a headache every day. Since you installed the machine, my headaches are gone."

OIL MIST COLLECTOR
